# Important

Please read below for best results, maximum protection and less flies using Dumpster Cure™.

## **DUMPSTER:**

Using a disposable, plastic cup, cast Granules into the bottom of an empty Dumpster creating a thin layer on the bottom. Cast on top of debris once or twice a day as needed. If liquid is in the bottom corners of the Dumpster, cast Granules directly onto the liquid to absorb and suppress odors. Cast Granules around the outside of Dumpster to absorb any liquid and/or grease. Let dry and sweep up.

## **GREASE SPILLS:**

Cast Granules directly onto grease spill residue around the Dumpster or Grease Bin. Let dry and sweep up.

## **TRASH CANS:**

Sprinkle Granules directly into trash liner. This is great for usage in public restrooms to help refresh with a cherry scent. You can sprinkle Granules in the bottom of cans (prior to inserting trash bag) for maximum absorption of liquid in the bottom of can. Refresh as needed.

## **NOTE:**

Our Granules absorb twice the amount of liquid than other clay-based products used for odor control. Additionally, it weighs ½ the weight of clay. Keep away from Children and Pets.

Thank You for using Dumpster Cure™
